## Software Engineer

Interested in algorithmically seeking out contradictions and inconsistencies in deceitful text, specifically in “bipolar” legal text. With roots in compilers, graph layouts & database query synthesis, and high-performance server code, the last 6+ years of my NLP development focus and intensive structural modeling of “case text” led to accumulated expertise in the convergence of algorithms and the law.

## Technical Skills

- Deep Learning, NLP (natural language processing), semantic searches, graph algorithms, compilers
- Priority skills: Lean, Rust, Python, PyTorch, Typescript, React, GPU/CUDA, PostgreSQL, Tensorflow, Julia
- Dormant skills: Java, C/C++, Golang, Javascript, Lisp, sys admin (manage my servers)
- Legal skills (with a systems/analytics/engineering perspective): Mass. and federal/constitutional code
